

# Carbon Data Platform

Eddie Sonne Hall

10/22/2024

Workshop to Advance USDA Guidelines on Quantifying GHG Flux in Managed Forest Systems

Forest  
Landowners

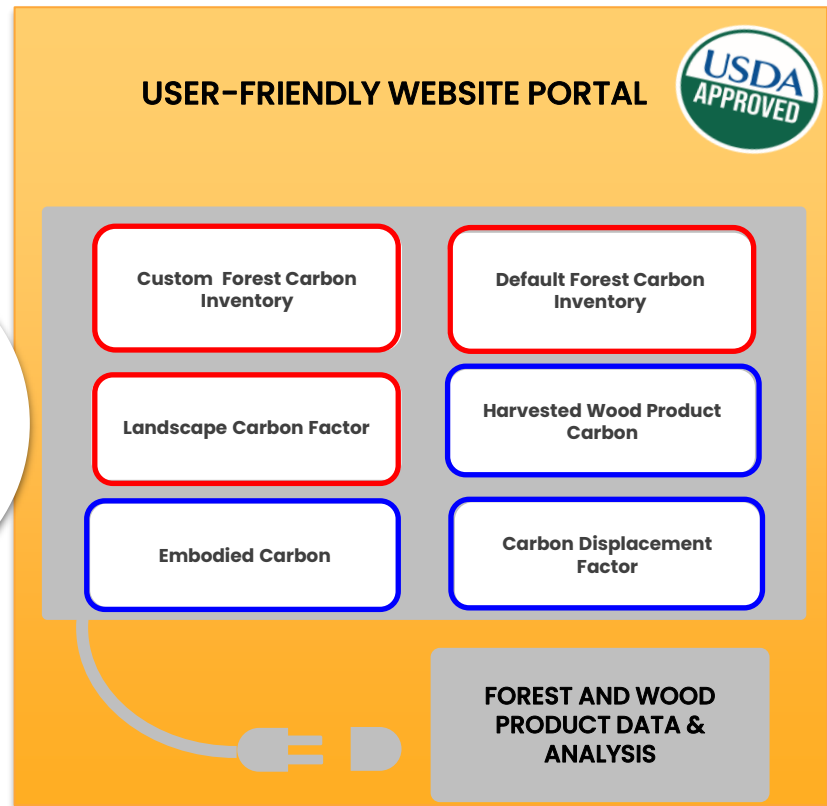

Product  
Manufacturers

Consumer  
Groups

# THE DATA PLATFORM VISION

Upstream and Downstream reporting of the full system's impact on carbon

3 Forest Flux Tools

3 Harvested Wood Product Tools

# Alignment with USDA Entity-Level Guidelines

The Platform will serve as **the primary means by which methods and data** from the Managed Forest Systems chapter within the *USDA Quantifying Greenhouse Gas Fluxes: Methods for Entity-Scale Inventory* (i.e., “Entity Guidelines”) **are delivered in a consolidated, user-friendly format.** This aligns with a USFS objective to serve as the primary source of information on carbon and carbon flows across U.S. forests.

- Custom calculator from “Large Landowner” 2014 guidelines
- Default forest inventory will be V2 base case
- Embodied Carbon and Displacement built out from HWP/LCA section
- HWP tool will be adapted from guidelines

# Project Schedule
