# Updated Silvics of North America Project

## Overview

This document is intended to serve as a public listing of all chapters intended for inclusion in the Silvics of North America (SNA), along with the associated lead authors. This target list of 400+ species represents the 1990 SNA species, the 250 most cited North American tree species, those that have been identified by our project staff, and those that have been accepted after being petitioned for in an application. The geographic scope of the updated SNA will be North America (defined as the continental US, Canada, Mexico, and land belonging to indigenous communities and nations within this region). Species with significant representation in any portion of this boundary are welcomed for inclusion. Species which are only found in Central and South America (defined as the region south of Mexico), the Caribbean, or Pacific Islands will not be included in the update.

If you are interested in applying for a lead author position, the USNAP will begin accepting applications on **June 5th, 2023**, and you can find the application instructions on the project website ([www.tinyurl.com/USNAPinfo](http://www.tinyurl.com/USNAPinfo)). In your application you will be able to note which species from the target list you are interested in, or petition for the inclusion of an additional species. If the chapter you are interested in has already been assigned a lead author and you would like to know about co-author opportunities, you are welcome to reach out via the email address provided under the "Contact" column. Co-author selection will be at the discretion of lead authors.

Please reference the table on the following pages which has all targeted species divided according to species group (Coniferous, Deciduous, and Exotic and Invasive) and lists all chapters alphabetically according to scientific name.

## Resumen

---

Este documento pretende servir como lista pública de todos los capítulos que se pretende incluir en el Silvics of North America (SNA), junto con los autores principales asociados. Esta lista objetivo de más de 400 especies representa las especies del SNA de 1990, las 250 especies arbóreas norteamericanas más citadas, las que han sido identificadas por nuestro personal del proyecto y las que han sido aceptadas tras ser solicitadas en una petición. El ámbito geográfico del SCN actualizado será Norteamérica (definida como la zona conterminal de EE.UU., Canadá, México y las tierras pertenecientes a comunidades y naciones indígenas dentro de esta región). Las especies con una representación significativa en cualquier parte de esta frontera son bienvenidas para su inclusión. Las especies que sólo se encuentran en América Central y del Sur (definida como la región al sur de México), el Caribe o las islas del Pacífico no se incluirán en la actualización.

Si está interesado en solicitar un puesto de autor principal, el USNAP comenzará a aceptar solicitudes **el 5 de junio de 2023**, y puede encontrar las instrucciones de solicitud en el sitio web del proyecto ([www.tinyurl.com/USNAPinfo](http://www.tinyurl.com/USNAPinfo)). En su solicitud podrá anotar qué especies de la lista objetivo le interesan, o solicitar la inclusión de una especie adicional. Si el capítulo en el que está interesado ya ha sido asignado a un autor principal y desea conocer las oportunidades de coautoría, puede ponerse en contacto con él a través de la dirección de correo electrónico que figura en la columna "Contacto". La selección de coautores quedará a discreción de los autores principales.

Consulte la tabla de las páginas siguientes, en la que todas las especies objetivo se dividen por grupos de especies (coníferas, caducifolias y exóticas e invasoras) y se enumeran todos los capítulos alfabéticamente según el nombre científico.

## Vue d'ensemble

---

Ce document est destiné à servir de liste publique de tous les chapitres destinés à être inclus dans la Silvics of North America (SNA), ainsi que des auteurs principaux associés. Cette liste cible de plus de 400 espèces représente les espèces du SCN de 1990, les 250 espèces d'arbres nord-américains les plus citées, celles qui ont été identifiées par notre équipe de projet et celles qui ont été acceptées après avoir fait l'objet d'une demande d'inscription. La portée géographique de la SCN actualisée sera l'Amérique du Nord (définie comme la zone contiguë des États-Unis, le Canada, le Mexique et les terres appartenant aux communautés et nations indigènes de cette région). Les espèces représentées de manière significative dans n'importe quelle partie de cette zone sont les bienvenues. Les espèces qui ne se trouvent qu'en Amérique centrale et du Sud (définie comme la région au sud du Mexique), dans les Caraïbes ou dans les îles du Pacifique ne seront pas incluses dans la mise à jour.

Si vous souhaitez postuler pour un poste d'auteur principal, l'USNAP commencera à accepter les candidatures **le 5 juin 2023**, et vous trouverez les instructions de candidature sur le site web du projet ([www.tinyurl.com/USNAPinfo](http://www.tinyurl.com/USNAPinfo)). Dans votre candidature, vous pourrez indiquer les espèces de la liste cible qui vous intéressent, ou demander l'inclusion d'une espèce supplémentaire. Si un auteur principal a déjà été désigné pour le chapitre qui vous intéresse et que vous souhaitez connaître les possibilités de coauteur, vous pouvez nous contacter à l'adresse électronique indiquée dans la colonne "Contact". La sélection des coauteurs est laissée à la discrétion des auteurs principaux.

Veillez vous référer au tableau des pages suivantes qui présente toutes les espèces ciblées réparties par groupe d'espèces (conifères, feuillus, exotiques et envahissantes) et qui répertorie tous les chapitres par ordre alphabétique de leur nom scientifique.
